Urbanisering

En urbaniserad värld

År 2025 bor drygt 10 miljoner människor i Sverige och de flesta bor i våra tre storstadsregioner.

Fram mot år 2050 har inflyttningen till storstadsområdena lett till att innerstaden har blivit tätare, men också till att storstadsområdena nu innehåller flera städer med egna kärnor.

VISION FÖR
SVERIGE 2025

Städer har utmaningar att lösa tillsammans

Figure 3: Map of Europe based on population and GDP per inhabitant (click to enlarge)

Note: The size of the territories represent the number of people living in each area, while the colour represents the GDP per inhabitant (ranging from low GDP per inhabitant in light yellow, to high GDP per inhabitant in dark blue). This is defined as Gross domestic product (GDP) per inhabitant, in PPS by NUTS 2 regions (% of the EU-27 average, EU-27 = 100), 2010 based on data from the [Eurostat Regional Yearbook 2013](#) (Turkey at national level). Basemap: Hennig Projection Gridded Population Cartogram. *Source:* [The Social Atlas of Europe](#)

THE GLOBAL GOALS

For Sustainable Development

Engagerade invånare

Smart City = Smart, enabled and connected people

○ Open

Ex.

- Free Wifi
- Open Intranet
- Searchable public documents
- City plan 2017
- The charman summary on FB

○ Self serving

Ex.

- E-tjänster
- Bygglövs(web)app
- CRM – Mina Sidor
- Smarta vardagstjänster

○ Co-creating

Ex.

- PixlaPiren
- DrottningH
- Volontärcenter
- Guide Hbg

"the World's most engaged citizens"

Data

Engaged citizens

Challenges

Open and accessible platforms

Smart city

Matching challenges with solutions

Blueprint

Open innovation in partnerships

Arenas

Challenges

Challenges – identifying the why and what

- Find "the daily life pains" of the citizens .
- Give life to good ideas
- Sort out and describe the challenges

Arenas

Arenas – both physical as digital

- To support co-working and co-creation
- To match challenges with solutions
- To meet like-minded or end users

Blueprint

Blueprint – how to be a smart city

- To share and “steal” good practices in collaboration with other cities and organizations
- Defining the digital ecosystem
- Co-funding and partnerships

Data

Data – the new oil

- Provide data as an asset for smart solutions
- Opening up the city as an programmable city
- Data-driven labs to make new insights

Finding new ways

SUCCESS

If you want to increase your success rate, double your failure rate. -Thomas Watson Jr.

Robbie Jones for **F&S COMPANY**

There should be one or more building blocks based on innovation or experimentation.

Finding new solutions to our challenges is often about finding new ways of doing things. Combining knowledge and technology in new ways and in other usages can many times be more efficient than new technology. And with that said we still love new technology!

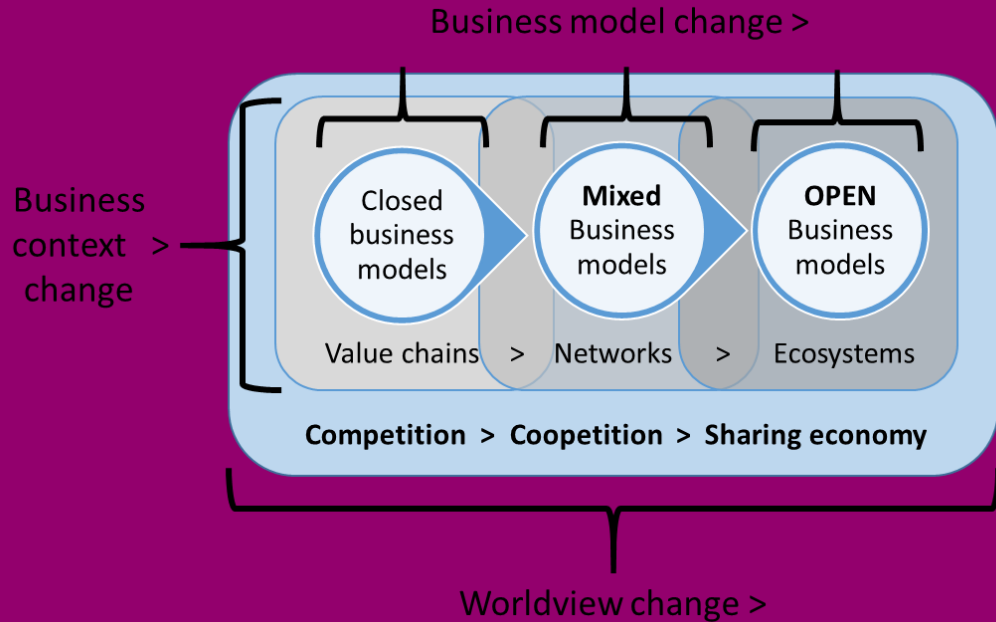

To succeed we must also be open about the risk of failure. Learning from failures is often the best way to reach innovation.

Try, fail, innovate!

HELSINGBORG

The digital ecosystem

As a city, university, company or citizen we must learn to collaborate, co-work and co-create.

A truly smart initiative is not only driven by one part but in collaboration with other partners in partnership.

As a city we must also trust others to provide better services to the citizens. In a smart digital ecosystem we are aiming for win-win-win situations.

Co-funding is one approach. Open innovation is another. What we need is the right mindset:
Sharing is caring!

Target challenges

THE GLOBAL GOALS For Sustainable Development

The development or use of new technologies must target the challenges to improve the quality of life, providing better services or any aspect of sustainability.

All actions should therefore be connected to one of [UN Sustainable Development Goals \(SDGs\)](#).

We also believe that a smart city is about engaging the citizens. We like to think that every citizen is a co-worker of ours. With 140 000 citizens we like the idea of 140 000 employees!
